

User Migration and Environment Management

Compatible with Physical and Virtual Machines
 Supports Citrix® XenDesktop, VMware® View, and Windows® XP/2000/Vista/7

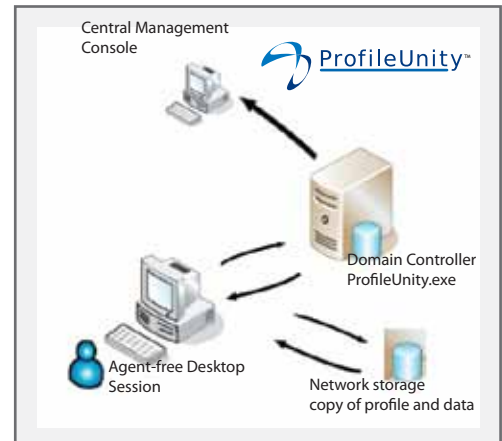

Liquidware Labs ProfileUnity™ is a complete migration and environment management solution for virtual and physical desktops. The solution enables users to seamlessly experience any Windows OS (XP/2000/Vista/7) from any desktop – a Citrix XenDesktop, VMware View session, or a physical PC. ProfileUnity delivers each user's personal workspace in Windows own native format, regardless of where the user logs on to the network.

Layered User Personalization

Whether you're implementing a proof-of-concept or scaling to production, ProfileUnity makes it easy to deploy new applications, infrastructure resources, and personality consistently across your enterprise users' desktops from one central console. Additionally, ProfileUnity migrates existing data and settings from your physical PCs to your next generation desktop platform. This innovative approach offers time and cost-saving capabilities to:

- **Deploy desktop settings from one central console**
- **Migrate user settings & data to VMware View, Citrix XenDesktop, and Windows 7**
- **Manage user experience per User, AD Group, IP Subnet, and more**

With ProfileUnity as part of your VDI solution, users retain their personalization as they logon to any desktop in the enterprise!

Network side agent design,
 consuming zero resources

Works independently of
 Roaming Profiles

Migrate documents and
 data to your next desktop

Configure all desktops from
 one central console

Forward and backward
 compatible with Windows
 XP/2000/Vista/7

Retain configuration
 settings from existing
 desktops

Set persistent
 application-level settings
 even between differing
 versions

Configuration and Deployment

ProfileUnity provisions new user settings and migrates select portions of existing enterprise Windows desktop environments. ProfileUnity extends the reach of IT staff by automating routine desktop management tasks such as creating application shortcuts, mapping drives, installing printers, and configuring Outlook MAPI profiles. The solution can also modify environment variables, adjust Internet proxy settings, configure RDP connections, and further customize client machines during user logon.

Administrators can gain productivity working on more important things, confident that ProfileUnity is automatically configuring client machines to exact specifications at every logon.

Migrations

ProfileUnity's unique design enables you to leverage your existing desktop configurations and user personalization for easy migrations to your next desktop strategy. Without ProfileUnity, migrating desktop and user settings would be error prone or otherwise take hours, days, or even weeks to recreate. Administrative configuration settings, as well as user personalization, such as customized application-level settings, Outlook signatures, spell checkers, etc., are instantly made available when the user logs on to their next generation desktop!

ProfileUnity takes care of migrating existing documents and data stored in the user's home directory as well. The solution features innovative background file-level data synch functionality which can be set to harvest existing critical data from Windows PCs before they are migrated. Documents and data are saved automatically to the user's network share location and are then instantly made available from wherever the user logs on. Local file settings can be remapped to the same network share to invoke best practice methods for data storage and disaster recovery. Offline file settings can be used to support laptops and other PCs which may be offline at times after migration.

ProfileUnity is part of Liquidware Labs' comprehensive award-winning Desktop Transformation Suite, which can greatly assist you in ensuring the success of your next desktop strategy.

Deployment & Migration

Save administrative costs • Speed user adoption • Automate deployment • Zero touch, no-agent design

Comprehensive Features

ProfileUnity is the only solution on the market that can both configure desktops and manage user personalization in Windows' own native format. There are no databases to manage and no shell environments to lock your organization, data, and users into a "data jail."

ProfileUnity literally takes all of the work out of customizing settings for VDI, or any Windows desktop, and maximizes user productivity and satisfaction. The solution lowers TCO through reduced administration in both new and existing implementations. In new roll-outs, ProfileUnity can provision new settings so your organization can deploy consistent configurations by company, group, department, or user. In existing VDI and Windows desktop installations, ProfileUnity can modify configurations, create new settings, and automate the mundane and time-consuming tasks that are a time drain for any IT department.

ProfileUnity provides instant benefits of time savings when hundreds or thousands of desktop configuration changes can be automated with a few clicks of a mouse!

ProfileUnity Competitive Benefits

	Liquidware Labs ProfileUnity™
Data stays in Windows native format	✓
Works independent of Roaming Profiles	✓
Harvests existing desktop files/data in background	✓
Migrates existing XP/2000 Windows profiles to new platform	✓
Compatible with and can migrate to VMware View Profiles™ and Citrix UPM™	✓
Zero-touch agent centrally applied with Group Policies	✓
Resource usage during session	None - zero impact on RAM and processing power
Supports Vista, Windows 7	✓
VMware ThinApp Deployment	✓
Can configure user settings	✓
Less than \$25 per user	✓

Get Started Today!

ProfileUnity delivers flexibility to your desktop infrastructure. Add the solution your environment today and the following tasks are easily accomplished or completely automated:

- **Easily move between physical and virtual desktops such as VMware View or Citrix XenDesktop**
- **Migrate data and documents from existing desktops to your next generation desktop**
- **Centrally modify existing infrastructure configurations with ease**
- **Map drives and printers**
- **Modify environment variables**
- **Set-up automated desktop shortcuts**
- **Ease management of software streaming solutions and VMware ThinApp**
- **Persist user profiles and personalization across a variety of Windows experiences**

ProfileUnity is affordably priced per user and is available from Liquidware Labs certified partners.
