

User Profile Flexibility and Powerful Desktop Management Automation

Overview

ProfileUnity Pro adds powerful automated desktop configuration and deployment integrity features to the user profile management, migration, and portability capabilities included in ProfileUnity.

ProfileUnity Pro extends the reach of IT staff by automating routine desktop management tasks such as creating application shortcuts, mapping drives, installing printers, and configuring Outlook MAPI profiles. The solution can also modify environment variables, adjust Internet proxy settings, configure RDP connections, and further customize client machines during user logon. Gain productivity working on more important things, confident that ProfileUnity Pro is configuring your client machines to your specifications at every logon. ProfileUnity Pro can also provision new user settings at roll-out, making it a logical upgrade from the standard edition of ProfileUnity.

Time Saving Tasks Automated

ProfileUnity Pro literally takes all of the work out of customizing settings for VDI, or any Windows desktop, and maximizes user productivity and satisfaction. The solution lowers TCO through reduced administration in both new and existing implementations.

In new roll-outs ProfileUnity Pro can create new MAPI profiles, map drives and printers, create RDP and application shortcuts, customize proxy settings and so much more. In existing VDI and Windows desktop installations, ProfileUnity Pro can modify configurations, create new settings, and automate the mundane and time-consuming tasks that are a time drain for any IT department.

ProfileUnity Pro instantly benefits organizations with time savings and deployment consistency when hundreds or thousands of desktop configuration changes are automated with a few clicks of a mouse!

Ensure VDI compliance with documentation

With the seemingly endless compliance issues that continue to arise, ProfileUnity Pro is an invaluable tool to document VDI and all other Windows desktop configurations. Full and complete reports enable management and IT to view configurations automated via ProfileUnity Pro on-demand.

VDI ON-RAMP!

Profile management, migration, portability, and deployment

Automates time consuming tasks

RDP and application desktop shortcuts auto-created

Central storage of all user profiles and documents for disaster recovery

Standardize settings by user, group, or department

Provides documented PDF's of your user profiles

Deploy consistently

Administer VDI from SMB to Enterprise with ProfileUnity Pro!

Select Features

User profile migration, management, and portability are standard in ProfileUnity. ProfileUnity Pro adds powerful desktop and user settings capabilities including:

MAPI Profiles - Automatically configure MAPI profiles for access to Microsoft Exchange server.

Shortcuts - Create shell shortcuts and web links. Shell shortcuts are pointers to programs and files on your computer. Web links are used by Internet Explorer for accessing sites on the Internet.

RDP Client - Enables auto-configuration of RDP client connections to servers from a centralized location with no additional software.

Map Drives - Connect and disconnect network drives. Options include persistent mappings, modifying the explorer label and more.

Map Printers - Connect and disconnect network printers. Options include capturing a port, setting the printer as default, and automatically adding the printer.

Folder Redirection - Redirect shell folders to an alternate location, and optionally move or copy existing data. A common use for this module is redirecting "My Documents" to a network share.

Office File Locations - Modify the default file locations for Microsoft Office. Users appreciate Office applications defaulting to the appropriate open/save network location. Administrators are assured that users are mapped to a preferred location.

Office Options - Configure Office user information and set options that control interaction with the user.

Outlook - Modify settings that control Outlook's behavior for message handling, message format, and AutoArchive.

Summary Reports - Instantly generate both PDF and text reports of your configuration, allowing a top-level view of your configuration. This can be instrumental in regulatory compliance and documenting your network setup.

Roll-out configuration settings in VDI easily with ProfileUnity Pro.

To place an order or for more information please contact your local VMware or Citrix authorized consultant or email info@liquidwarelabs.com.

FACTS

No additional client software necessary on VDI image or desktop

Supports any VDI or Windows desktop experience including laptops, workstation and servers

Low overhead does not impact performance and decreases login times

Automate by user, department, group, or OU

Saves countless man-hours re-creating administrative processes when VDI is rolled out

Don't spend countless hours re-creating user profile settings.

Automate IT with ProfileUnity Pro!
