Liquidware Labs Stratusphere UX™

In the rapidly evolving and complex world of IT management one thing is constant; the need to deliver stable and highly optimized mission critical desktops and applications to your end-users. Stratusphere UX provides you with the visibility needed to ensure desktops are consistently delivered with the best user experience available.

Stratusphere UX is the best choice for unmatched service-level management of your entire desktop infrastructure. Gain insight into all levels of application and user interactions – from the desktop, to the network, to the datacenter, to the cloud.

Complete User Experience Awareness

Stratusphere UX is designed to be the cornerstone of your user experience assurance methodology. Stratusphere UX provides unparalleled visibility into user and application usage, hardware and software inventory and ongoing monitoring of Citrix XenDesktop and VMware View environments. Get the full picture of virtual as well as physical Windows PCs, endpoints, and related infrastructure servers.

From Assessment to POC to Production

Stratusphere UX is integral before, during, and after you roll-out your next desktop strategy by delivering intuitive reporting and alerting of user experience ratings and infrastructure subsystems.

Identify which VMs, users, & applications are causing I/O storms

Identify slow network latency, network application, & protocol performance

Identify login delays, application launch times, non-responsive applications, disk, & CPU queues

Identify traffic from endpoints, desktops, & servers in a multi-tenancy environment with named user & application correlation

Identify VM, user, & application workload - CPU / Memory / Disk / Graphics / Network / including disk IOPS & storage requirements

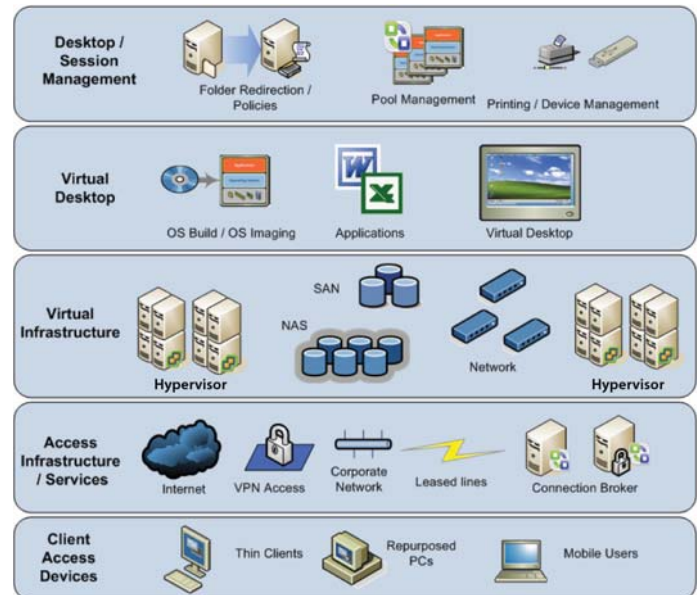

Stratusphere UX provides you with an accurate and methodical way to measure the user experience of your desktop and proof-of-concept (POC) environment. Now you can validate pilots by taking a healthcheck of your environment before and after a specified time period with our exclusive one-click user consumption and experience comparison reports. Compare platforms, protocols, end points, storage, network, and resource pool reservations – by application, user, group, and over custom time periods.

Instantly evaluate aggregated consumption and response time in desktop, network, server, and storage subsystems from detailed comparative reports that Stratusphere automatically generates.

Service-Level Assurance

Stratusphere UX takes a proactive approach to user experience by providing an ongoing and constant rating of enterprise desktop performance – by application, group, or user. The solution tracks hundreds of metrics on physical and virtual desktops and infrastructure performance, including many 'in-guest' metrics together with hypervisor, storage, and network metrics. Administrators gain access to in-depth reports that are used to provide support for desktop infrastructure decisions and to ensure quality user experience across all your desktops.

Ensure Levels of Service for Applications and Users, Speed Help Desk Resolution, Plan for Scale!

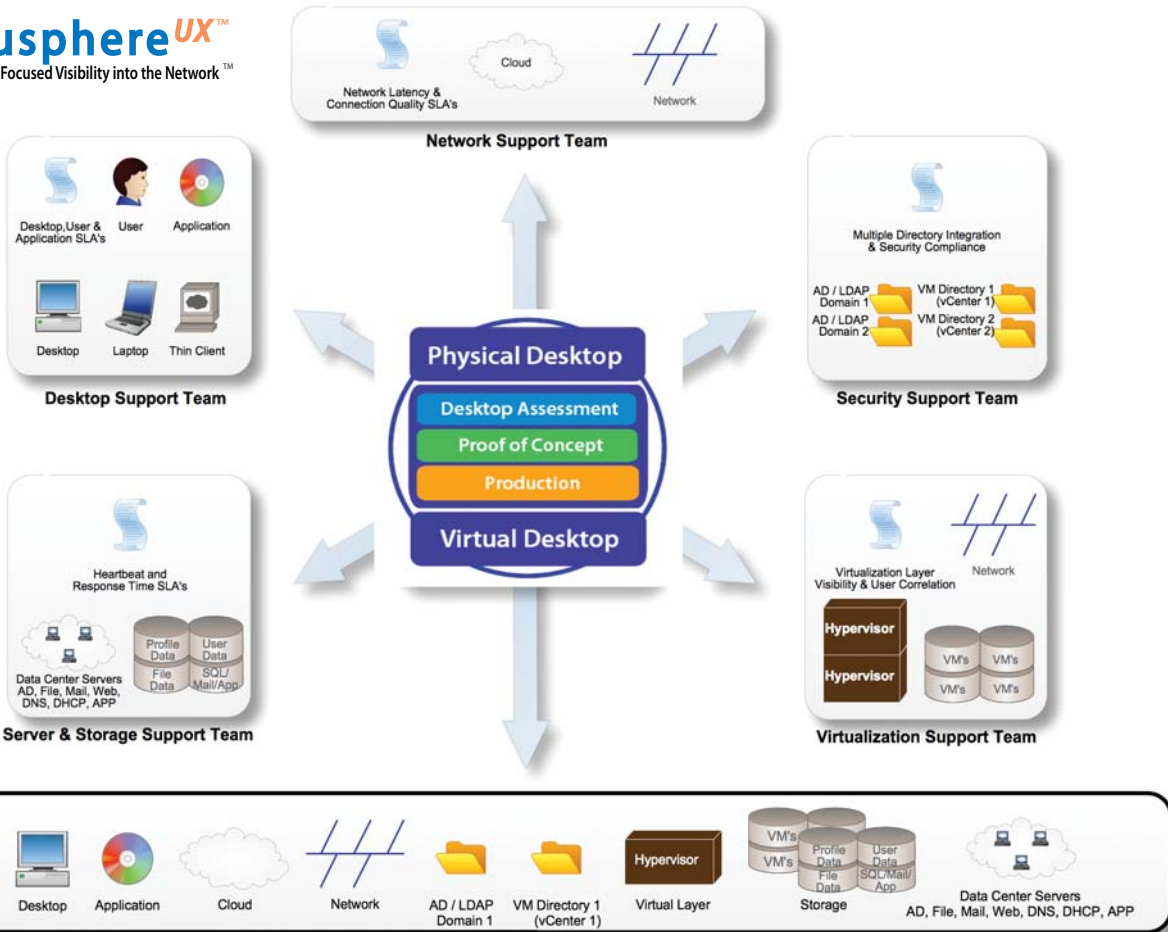

One Solution with a Comprehensive View of the Related Infrastructure

Desktop administrators finally have access to critical layers of the infrastructure, removing the political battle of who will manage desktops that are now on server class hardware in the datacenter. Stratusphere provides comprehensive read-only access to the endpoints, user, and application workload, including network, storage, and hypervisor layers. This intuitive solution can also alert the proper support team when user experience is in a negative trend or is compromised.

- Intuitive reporting of User Experience rating
- Drill down to granular details, reports & alerting
- Identifies issues by correlating data & aggregating results
- Proactive watch over enterprise desktop performance
- Alerts proper teams to manage issue (network, hypervisor, storage, desktop)

Stratusphere UX Provides a Complete View of Desktops and Related Infrastructure from the Endpoint to the Network to the Data Center

STRATUSPHERE REDUCES TCO AND IMPROVES DESKTOP SUPPORT
Stratusphere correlates network, user, application, machine and storage metrics for a quantitative SLA reducing your desktop and server TCO whether physical or virtual, desktop or server.
